

# BCSI New Product Highlights

## Rock Solid Software Stability

- Latest Linux OS with Red Hat for rock solid stability
- Enhanced “heartbeat” system reporting for improved uptime, using SuperClient™
- Improved “bad camera” identification and notification feature

## Increased Horsepower for Media Processing

- Powerful Intel Core 2 Duo processor for superior processing, comes standard on the Pro Edition NVR
- Up to 4 CIF – 640x480 resolution
- 120 total Frames Per Second for the Pro-1600 with 16 analog cams, & 60 total Frames per Second for the Elite-800 with 8 analog cams
- Supports up to 8 IP cameras
- BCSI provides you the choice to determine how you utilize your increased performance: increase frame rate per camera and/or add additional IP cameras

## Increased Support for Codecs and IP Cameras

- Increased support for codec MPEG4 to increase resolution while decreasing storage space
- Growing list of IP network cameras supported, included PTZ cameras and audio
- Easy integration of both analog and IP cameras

## Other Enhanced Benefits:

- Up to 1 Terabyte of internal storage, with option for more.
- Save your protected events on either a DVD-RW, USB Flash, Network folder or external hard drive.
- Up to 750 GB of internal storage, with option for more.
- Save your protected events on either a DVD-RW, USB Flash, Network folder or external hard drive.
- E-mail notification feature for Dynamic IP address customers, alert and update customers when their ISP re-issues a new IP address.
- Email notification to specified recipients based on Motion Detection Events, with the e-mail including 5 snapshots of the motion detected event

## Best Hardware Components and Options

- Solid State Drive (SSD) memory option for increased system stability
- Highest quality brands used for hardware components

## New SMART Media Tools that Reduce False Alarms and Provide Proactive Control

- Maximize Search capability - Search for video Event files by: Recording Type (Time-lapse, Motion Detect, Both), Day of the week, Time, and Camera. Mask Search – mask specific areas to search through for motion, within a specific camera’s frame of view.
- Time Lapse and Motion Detect recording can take place simultaneously and independently – allowing customers the ability to maximize their event recording and search capability.

## The Next Generation of Security Surveillance Software

## View AND Manage multiple system locations over the network with our SuperClient™

- BCSI’s SuperClient Management Software allows users to pool together multiple remote systems and manage from one user interface
- Choose to view and manage the software from any PC, laptop, Smartphone, cell phone or PDA with internet access and standard web browser
- Enhanced “heartbeat” system reporting with SuperClient™, alerts you whenever a system on the network goes down
- Increased number of viewable cameras on SuperClient™
